EDUCATION

University Of North Texas

Master of Science – Computer Science

Coursework: Advanced Algorithms, Operating System Design, Database Systems

Aug 2024 – May 2026

Denton, TX

Reva University

Bachelor of Technology – Electronics and Communication

Aug 2018 – Jun 2022

Bangalore, India

SKILLS

Programming Languages: JavaScript, TypeScript, Python, C++, SQL

Backend & Frontend: Node.js, Express.js, Redis, REST APIs, React.js, Next.js, React Native

Databases & Caching: MySQL, MongoDB, DynamoDB, Oracle

Cloud & DevOps: AWS, Azure, Docker, CI/CD, Datadog, Splunk

Concepts: Algorithms & Data Structures, System Design, Operating Systems, Networking, Linux

WORK EXPERIENCE

Nest Friends

Aug 2025 – Nov 2025

Software Engineering Intern

Wilmington, DE

- Built and deployed backend authentication and messaging services using Node.js, MongoDB, and AWS, supporting **200+ daily active** users and improving retention by **25%** by strengthening security and engagement workflows.
- Improved API performance by **200–250 ms** through database indexing and query optimization, enabling faster real-time responses and maintaining stability under peak traffic.
- Optimized AWS CI/CD pipelines and backend deployments, reducing deployment time by 40% and improving reliability.
- Improved application stability by **20%** through backend error handling, validation, and observability improvements.

DXC Technology

Jan 2023 – Jul 2024

Software Engineer

Hyderabad, India

- Developed and deployed backend services and REST APIs integrating multiple enterprise systems, improving data consistency and reducing latency by **25%** by streamlining data flow and service communication.
- Built monitoring and observability dashboards using Datadog and Splunk, reducing outage detection time by **60%** and improving system uptime through proactive alerting and log analysis.
- Led **AWS cloud migration** of financial backend modules (EC2, S3, IAM), reducing infrastructure costs by **\$6,000** annually.
- Designed backend APIs consumed by **4 global teams**, supporting integration with frontend and downstream services.
- Defined backend service interfaces and data flows to handle high request volume, adding caching for frequent reads and retry logic to reduce failures from downstream service timeouts.

PROJECTS

AI Resume Optimization Platform - makemyzume.com

Sep 2025 – Dec 2025

Backend Engineer

Denton, TX

- Built backend services for AI-driven resume optimization, reducing resume customization time from 20–30 minutes to under **5 minutes** while improving overall user experience and ATS alignment.
- Implemented async processing pipelines with caching and REST APIs to handle **500+ optimization** requests per month, resulting in consistent performance and stable response times under varying workloads.

UNT Cafeteria Mobile Application

May 2025 – July 2025

Backend Engineer/Team Lead

Denton, TX

- Built backend order-processing and real-time synchronization services using Node.js, WebSockets, and Redis, supporting up to **2000+** concurrent users during peak cafeteria hours.
- Integrated Stripe payment gateway with backend optimizations, reducing payment response time by 20%, resulting in **95%** transaction success rate and enabling cafeteria staff to handle load without downtime.

ACTIVITIES AND LEADERSHIP

University of North Texas's College of Engineering

Jan 2025 – Dec 2025

Teaching Assistant for CS-3530 (Computer Networks)

Denton, TX

- Mentored **80+ students** in network protocols, system design, and cloud computing by simplifying complex concepts into scalable solutions, improving lab scores by 20% while fostering collaboration and problem-solving skills.

GradInnoHack Hackathon, University of North Texas

Apr 2025 – Apr 2025

Team Lead (3rd Place)

Denton, TX

- Developed a real-time airport navigation prototype with multilingual support, delivered within **24 hours**.
